

How to enable PC-Anywhere Dial-In

1. Connect a phone line to your modem jack on your computer, and then double-click on the Symantec pcAnywhere desktop icon to open the pcAnywhere application.

2. With the pcAnywhere application open on your desktop, click on the “Be a Host PC” button in the upper left hand corner.

3. Double-click on the “MODEM” icon in the pcAnywhere application window causing the pcAnywhere application to minimize and appear as a very small icon (that looks like a computer) located in the lower right-hand system tray. Note: If you position your mouse cursor over the icon, a pop-up label will appear that reads “pcAnywhere Waiting”.

4. Your system is now enabled for remote dial-in via pcAnywhere.
